

## Press release

Vienna, 12 April 2024

### **Austrian Green Planet Building® Award 2024 for the "Europa" in Levallois-Perret.**

**Refurbishment and renovation have resulted in a climate-fit building that is a sight to behold.**

**The office building in the city near Paris forms the perfect symbiosis of a convincing landmark, energy efficiency and now use-neutral office space to increase longevity. The significantly increased amount of open and green spaces need not even be mentioned. This is sustainable architecture "made in Austria."**

Baumschlager Eberle Architekten draw on the full scope of their expertise in the field of sustainable architecture: existing building materials were used in the refurbishment of the existing building, the building has a district heating and cooling connection, and the thermal refurbishment of the building envelope was accompanied by a visually striking redesign of the front façade. The significant reduction in primary energy requirements is also impressive. The number of open spaces and green areas has been significantly increased, new office space has been created and the existing space has been made more flexible. Sustainable heart, what more could you want?

The Austrian Green Planet Building® (AGPB) Award focuses on energy efficiency and the supply of renewable energy. This transfers the objectives and criteria of the national climate protection initiative klimaaktiv for the construction and property industry to an international environment. AGPB honours the outstanding achievements of Austrian planning offices, consultants, construction companies and production companies abroad in the field of sustainable building.

AGPB is an initiative of the Federal Ministry for Climate Protection, Environment, Energy, Mobility, Innovation and Technology (BMK) and ADVANTAGE AUSTRIA.
