

## Press release

Vienna, 15 April 2024

# Austrian Green Planet Building® Award 2024 for the Škoda headquarters in the Czech Republic.

**Minimising energy consumption thanks to modern building technology.**

**The new Škoda headquarters Laurin & Klement Kampus in Mladá Boleslav is energy-efficient and climate-friendly. The building ensemble impresses with its sophisticated technical building equipment (TBE) including efficient monitoring via a BUS system.**

ATP architekten ingenieure and ATP sustain have not only successfully applied their repertoire of sustainable building to the building services: The ventilation system with 80 per cent heat recovery is just one aspect. The sun protection with maximum natural lighting is just as much a part of this as the monitoring by the BUS system. E-charging stations for cars and e-bikes are also part of the sustainability concept as well as district heating and a PV system. Roof gardens and interior design create a pleasant working atmosphere.

The Austrian Green Planet Building® (AGPB) Award focuses on energy efficiency and the supply of renewable energy. This transfers the objectives and criteria of the national climate protection initiative klimaaktiv for the construction and property industry to an international environment. AGPB honours the outstanding achievements of Austrian planning offices, consultants, construction companies and production companies abroad in the field of sustainable building.

AGPB is an initiative of the Federal Ministry for Climate Protection, Environment, Energy, Mobility, Innovation and Technology (BMK) and ADVANTAGE AUSTRIA.
